The global Ocean-Bottom Seismographic Observation System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Ocean-bottom seismographic observation systems provide characterization of seismicity/earthquake activity along tectonic plate boundaries where two key phenomena can occur: large-magnitude subduction zone earthquakes and seismicity associated with migration of melt (magma) beneath the seafloor at underwater volcanoes. Because the seismometers are cabled and, hence, connected directly to shore, they can provide detection of earthquakes in real-time.
