Medical Diagnostics: OCT scanners are widely used in ophthalmology for diagnosing and monitoring eye conditions such as macular degeneration, glaucoma, and diabetic retinopathy. The technology helps ophthalmologists visualize retinal layers and blood vessels with exceptional detail.

Early Disease Detection: OCT allows for the early detection of diseases and conditions in various medical specialties, including cardiology (intravascular OCT), dermatology, gastroenterology, and oncology. Early diagnosis often leads to more effective treatments.

Retinal Imaging: In addition to disease diagnosis, OCT scanners are used for detailed retinal imaging, facilitating the assessment of treatment efficacy and disease progression in patients with retinal disorders.
