The global Octadecyl Erucamide market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Octadecyl erucamide is an amide product containing two long carbon chains, which has higher stability, is suitable for processing temperatures higher than single carbon chain amides, and has a slower migration rate than single carbon chain amides. For example, it is suitable for higher processing lubrication requirements such as nylon. In addition, stearic erucic acid amide, due to its long carbon chain with both rare double bonds and saturated long carbon chain, has the requirements of balancing lubrication and demolding performance.
