The global Octadecyl Trimethyl Ammonium Chloride market size is predicted to grow from US\$ 199 million in 2025 to US\$ 272 million in 2032; it is expected to grow at a CAGR of 4.6% from 2026 to 2032.

Octadecyl trimethyl ammonium chloride is a long-chain alkyl quaternary ammonium salt cationic surfactant with a molecular structure containing octadecyl hydrophobic long-chain and quaternary ammonium salt hydrophilic groups. It has good cation adsorption, emulsification, dispersibility, flexibility, anti-static properties, and surface modification ability. This product is usually supplied in the form of aqueous solution, alcohol water system, paste or high-purity powder, and is widely used as a hair conditioner, fabric softener, antistatic agent, organic bentonite modifier, asphalt emulsifier, pigment and filler dispersion, material surface modification and some fine chemical formula systems. In 2025, global Octadecyl Trimethyl Ammonium Chloride production reached approximately 94.56 K MT, with an average global market price of around US\$ 2,153 per MT.

Octadecyl trimethyl ammonium chloride is a type of cationic surfactant with mature applications and diverse functions. With excellent surface adsorption capacity and long-chain alkyl structure, it can form stable cationic adsorption layers on the surfaces of fibers, minerals, pigments, hair, and polymer materials, thereby improving flexibility, anti-static properties, dispersion stability, and interfacial compatibility. In the field of personal care, this product is often used under the name Steartrimonium Chloride for hair conditioners, hair masks, and hair care products, which can improve hair wet combing, softness, and anti-static effects; In the fields of textile and washing, it can be used as a soft finishing agent and anti-static additive to improve the hand feel and wearing comfort of fabrics; In the industrial field, it can be used for organic bentonite modification,

asphalt emulsification, coating ink dispersion, rubber anti-static, and material surface treatment.

Octadecyl trimethyl ammonium chloride combines the properties of a daily chemical raw material and an industrial additive. It can be used in consumer product formulations such as personal care and fabric care, as well as in industrial systems such as coatings, inks, lubricants, drilling fluids, asphalt, plastics, and composite materials. With the increasing demand from downstream customers for low odor, low free amine, formula stability, environmental compliance, and customized concentration, products are developing towards high purity, low impurities, low irritation, good compatibility, and specialized formula direction. Enterprises with stable supply of tertiary amine raw materials, quaternization reaction control, impurity management, daily chemical quality system, and industrial application development capabilities in the future will have stronger competitive advantages in this type of product market.
