The global Odd Form Insertion Machines market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Odd Form Insertion Machines are automated systems designed for placing non-standard, irregularly shaped components onto printed circuit boards (PCBs) during the assembly process. Unlike traditional pick-and-place machines that handle standard components like resistors or capacitors, odd form insertion machines are tailored to handle components with unique geometries, such as connectors, switches, transformers, or large capacitors. These machines use specialized grippers, vision systems, and insertion mechanisms to ensure precise alignment and placement, enhancing the efficiency and accuracy of PCB assembly for complex or bulky parts that are difficult to handle manually or with conventional automation.

United States market for Odd Form Insertion Machines is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
