The global Odor Control Atomization System market size is predicted to grow from US$ 1319 million in 2025 to US$ 1624 million in 2031; it is expected to grow at a CAGR of 3.5% from 2025 to 2031.

An odor control atomization system is a device system that utilizes high pressure to atomize water or deodorant solution into tiny particles and evenly spray them into designated areas to remove or neutralize malodorous gases. By fully contacting atomized particles with odor molecules, this system effectively removes odors in the air through mechanisms such as physical adsorption, chemical neutralization, or biodegradation. Widely used in places with high concentrations of malodorous gases, such as waste treatment plants, sewage treatment plants, livestock farms, and food processing plants, odor control atomization systems not only rapidly eliminate odors but also maintain air freshness, improving work environments and residents' quality of life.

United States market for Odor Control Atomization System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Odor Control Atomization System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
