Abstracts

The global Odor Control Zeolite market size is predicted to grow from US$ 419 million in 2025 to US$ 633 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

Odor Control Zeolites are functional inorganic adsorbent materials based on natural zeolites, synthetic zeolites, or engineered zeolites produced through ion exchange, surface modification, metal-ion loading, pore-structure engineering, and particle engineering. They utilize the ordered microporous crystalline structure, relatively high surface area, molecular-sieving characteristics, selective adsorption behavior, and ion-exchange capacity of zeolites to capture, immobilize, reduce, or control ammonia, hydrogen sulfide, mercaptans, amines, aldehydes, organic acids, and other malodorous volatile organic compounds. Commercial products are supplied in forms including powders, fine powders, granules, beads, agglomerates, pellets, and other engineered particles.

The global odor control zeolites market is a growing niche functional materials market composed of both natural odor control zeolites and synthetic/engineered odor control zeolites. One of the market's most distinctive structural characteristics is the divergence between volume and value. Natural zeolites, supported by their relatively low cost and high consumption volumes, account for the majority of demand by tonnage in livestock farming, waste management, wastewater treatment, and broader environmental odor-control applications. Synthetic and engineered zeolites, although representing a smaller share of total volume, benefit from high-silica hydrophobic structures, ion-exchange modification, selective molecular adsorption, and precise particle engineering, and are estimated to contribute approximately 80% of global market revenue in 2025. From a demand perspective, industrial odor control remains the largest individual application segment, accounting for an estimated 31% of the global market in 2025. Major use cases include odor and malodor control in chemical processing, plastics manufacturing,

coating operations, recycling and recycled-material processing, and other industrial production environments. Solid-waste and refuse management, wastewater and sewage treatment, and agricultural and livestock applications form the core demand base for natural odor control zeolites. At the same time, “Other Applications” are estimated to represent approximately 25% of market value and are emerging as one of the most strategically important growth areas. These applications include personal care and deodorant products, household and indoor odor control, pet and sanitary products, textiles and nonwovens, automotive interiors, packaging and polymers, as well as coatings and adhesives. From the supply perspective, the industry exhibits a clear two-tier competitive structure. On one side, Japan, Switzerland, France, Italy, and other developed specialty-material markets host a group of suppliers focused on high-silica zeolites, hydrophobic zeolites, ion-exchanged zeolites, and other engineered zeolite materials. Competition among these suppliers has increasingly shifted from simply providing adsorption materials toward pore-size engineering, Si/Al ratio optimization, hydrophilic/hydrophobic property control, selective adsorption performance, particle engineering, and compatibility with downstream formulations. On the other side, the United States, T?rkiye, Eastern Europe, Australia, Mexico, and selected Asian countries possess relatively abundant natural clinoptilolite resources and processing capacity, resulting in a more fragmented supply model characterized by regional mining, mineral processing, and downstream application development. Recent industry developments further indicate that odor control zeolites are moving toward greater specialization, higher-value applications, and increasingly globalized supply chains. SAES has introduced ZeoSAES® DeoPrecision for stick and roll-on deodorant formulations, using engineered zeolite as a single INCI active ingredient and emphasizing selective control of key malodor VOCs, illustrating the expansion of zeolites from conventional environmental adsorbents into higher-value personal care formulations. Zeochem has continued to strengthen its global materials and adsorption platform through investment and acquisitions: in 2024, it completed the acquisitions of Sorbead India and Swambe Chemicals, expanding its molecular-sieve distribution and supply capabilities in India; in 2025, it acquired Canada-based SiliCycle, further strengthening its North American manufacturing, R&D, and high-performance separation materials platform. Consolidation is also taking place within the natural zeolite supply chain in Japan, where Veolia acquired 100% of Zeeklite in 2025, integrating natural zeolite mining and sales capabilities with the broader waste-management and environmental-services operations of a major global environmental group.

Report Scope

LP Information, Inc. (LPI) ' newest research report, the “Odor Control Zeolite Industry

Forecast" looks at past sales and reviews total world Odor Control Zeolite sales in 2025, providing a comprehensive analysis by region and market sector of projected Odor Control Zeolite sales for 2026 through 2032. With Odor Control Zeolite sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US$ millions of the world Odor Control Zeolite industry.

This Insight Report provides a comprehensive analysis of the global Odor Control Zeolite landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyzes the strategies of leading global companies with a focus on Odor Control Zeolite portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms' unique position in an accelerating global Odor Control Zeolite market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Odor Control Zeolite and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Odor Control Zeolite.

This report presents a comprehensive overview, market shares, and growth opportunities of Odor Control Zeolite market by product type, application, key manufacturers and key regions and countries.

2 EXECUTIVE SUMMARY

2.1 World Market Overview
  2.1.1 Global Odor Control Zeolite Annual Sales 2021-2032
  2.1.2 World Current & Future Analysis for Odor Control Zeolite by Geographic Region, 2021, 2025 & 2032
  2.1.3 World Current & Future Analysis for Odor Control Zeolite by Country/Region, 2021, 2025 & 2032
2.2 Odor Control Zeolite Segment by Type
  2.2.1 Synthetic Odor Control Zeolites
  2.2.2 Natural Odor Control Zeolites
  2.2.3 Odor Control Zeolite Sales by Type
    2.2.3.1 Global Odor Control Zeolite Sales Market Share by Type (2021-2026)
    2.2.3.2 Global Odor Control Zeolite Revenue and Market Share by Type (2021-2026)
    2.2.3.3 Global Odor Control Zeolite Sale Price by Type (2021-2026)
2.3 Odor Control Zeolite Segment by Material Properties
  2.3.1 Hydrophobic Odor Control Zeolites
  2.3.2 Hydrophilic Odor Control Zeolites
  2.3.3 Odor Control Zeolite Sales by Material Properties
    2.3.3.1 Global Odor Control Zeolite Sales Market Share by Material Properties (2021-2026)
    2.3.3.2 Global Odor Control Zeolite Revenue and Market Share by Material Properties (2021-2026)
