An Off-Grid EV Charging Station is a facility designed to charge electric vehicles (EVs) that operates independently of the traditional electrical grid. These stations typically use renewable energy sources such as solar, wind, or hydropower to generate electricity, storing the energy in batteries for use when needed. This setup is particularly useful in remote or rural areas where grid access is limited or unreliable, or in urban settings to reduce reliance on fossil fuels and decrease the carbon footprint associated with vehicle charging.

The global Off-Grid EV Charging Station market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
