The global Off-Grid Microgrids market size is predicted to grow from US\$ 14145 million in 2025 to US\$ 42011 million in 2032; it is expected to grow at a CAGR of 16.9% from 2026 to 2032.

In 2025, global Off-Grid Microgrid output reached about 17 GW and global capacity of around 26 GW. The average price is about USD 850 per kW, with gross margins near 23%. Off-Grid Microgrids are self-sustaining, localized energy systems that operate independently from the main utility grid, designed to generate, store, distribute, and manage electricity in remote or infrastructure-limited areas. They typically integrate multiple distributed energy resources such as solar PV, wind turbines, diesel or gas generators, and battery energy storage systems coordinated through advanced control systems and energy management software to ensure stable and reliable power supply. The supply chain of off-grid microgrids spans upstream component providers (solar modules, inverters, batteries, gensets, power electronics, and control chips), midstream system integrators and engineering, procurement, and construction (EPC) firms that design and deploy turnkey microgrid solutions, and downstream operators and service providers delivering energy-as-a-service to end users such as rural communities, mining sites, islands, military bases, and telecom towers, with increasing integration of IoT, AI-based energy optimization, and remote monitoring platforms.

United States market for Off-Grid Microgrids is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
