Off-highway exhaust gas aftertreatment system refers to a device designed to treat the exhaust emissions from off-highway mobile machinery, such as excavators, loaders, and bulldozers. Its purpose is to reduce harmful substances in the exhaust, such as nitrogen oxides (NOx) and particulate matter (PM), through a series of advanced technologies like selective catalytic reduction (SCR) and diesel particulate filters (DPF). The system's functions include purifying exhaust gas, reducing harmful emissions, improving air quality, and protecting the environment. By using an off-highway exhaust gas aftertreatment system, the negative impact on the environment during machinery operations can be significantly reduced, promoting sustainable development.
