## Abstracts

The global Office Shredder market size is predicted to grow from US\$ 1209 million in 2025 to US\$ 2126 million in 2032; it is expected to grow at a CAGR of 7.8% from 2026 to 2032.

Global sales of office shredders reached 20 million units in 2025, with an average price of \$61 per unit.

An office shredder is a desktop or floor-standing device consisting of a motor, blade assembly, and comb. It uses rotating blades to cut paper into strips, granules, or microparticles to prevent information leaks and meet daily office confidentiality and compliance requirements.

The main components of an office shredder are a plastic casing, a metal blade assembly, and a motor. The casing is mostly made of ABS or PMMA injection molded parts, accounting for approximately 35% of the total weight. The blade assembly uses alloy steel or high-speed steel such as D2, H13, and 4140, achieving a hardness of HRC 56-60 after quenching, and is the most valuable component. The motor is a series-wound or DC motor with a power of 150-500 W. Together with gears, chains, circuit boards, and a paper bin, it constitutes the remaining parts.

Cost Structure: Plastics and hardware components account for 45-50% of the ex-factory price, with the blade assembly accounting for approximately 40% of raw material costs; motors and electrical controls account for 15%; labor assembly and manufacturing costs account for 10%; surface treatment, testing, packaging, and transportation costs account for 5-7%; and brand channels and profits account for 15-20%.
