An office silent shredder is a device used to shred paper and other document materials into small pieces or thin strips to protect the security and privacy of sensitive information. Compared with traditional paper shredders, silent shredders have the characteristics of reducing noise and vibration, suitable for use in office environments. They are commonly used to destroy files, folders, business cards, etc. to prevent confidential information from being leaked. As the sensitivity to noise in the work environment increases, the noise control of office silent shredders will continue to improve to provide quieter operation.
