The offset parallel shaft gearmotors is a type of gear motor design in which the gear shaft is parallel to the motor output shaft but with a certain position offset. This design allows the gear to rotate in a non-center position, thereby producing a specific transmission effect. Its advantage is that it can achieve a larger transmission ratio and torque output while maintaining a small size and weight. Features include efficient power transmission, precise output control, low operating noise and long service life. It is suitable for applications with limited space and requiring large torque, such as automation equipment, conveying systems and other industrial machinery.

United States market for Offset Parallel Shaft Gearmotors is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Offset Parallel Shaft Gearmotors is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
