An offset print inspection system is a quality control technology used in the offset printing process to automatically detect printing defects such as color deviations, registration errors, smudges, misprints, or missing elements. These systems use high-resolution cameras and image processing software to scan printed sheets in real time, comparing them against a digital reference or master image. By identifying flaws early, they help ensure consistent print quality, reduce waste, and improve production efficiency in industries like packaging, publishing, and labeling. Many systems also generate detailed inspection reports for traceability and quality assurance.
