In 2025, global production of offshore crane vessels reached 183 units, with an estimated average selling price of \$11.7 million per vessel. Offshore crane vessels are specialized engineering vessels capable of offshore operations; they are equipped with high-tonnage offshore cranes?such as truss-boom cranes, fully revolving cranes, sheerlegs, or A-frames?as well as systems like Active Heave Compensation (AHC), Dynamic Positioning (DP), or mooring systems. They are primarily used for the installation and decommissioning of offshore oil and gas platforms; the lifting of offshore wind foundations, towers, and substation modules; deepwater module installation; subsea infrastructure construction; marine salvage; support for pipeline and cable projects; and the transport and installation of large offshore structures. The upstream sector encompasses marine steel plates and sections, welding materials, anti-corrosion coatings, main engines/generator sets, thrusters, DP systems, hydraulic systems, winches, wire ropes, slewing bearings, offshore cranes, electronic control systems, navigation and communication equipment, classification society certification, and offshore engineering design. The midstream sector consists of shipyard manufacturing. The downstream sector includes offshore wind EPC contractors, oil and gas companies, offshore contractors, platform decommissioning contractors, entities involved in port and cross-sea engineering construction, and salvage companies. Gross profit margins range from approximately 20% to 35%.
