According to this study, the global Offshore Semi-submersible Drilling Rig market size will reach US\$ 973 million by 2031.

A Offshore Semi-submersible Drilling Rig is a type of offshore drilling platform used primarily for deepwater oil and gas exploration and production. It floats on partially submerged pontoons, providing excellent stability in rough seas and making it ideal for operating in deep or ultra-deep waters. These rigs can either be moored to the seafloor or dynamically positioned using thrusters to stay in place. Semi-submersible rigs are versatile, offering advantages for drilling, exploration, and even production in harsh offshore environments, where fixed platforms are impractical.
