An oil - free helical - lobe compressor is a type of positive displacement compressor. It consists of two intermeshing helical - shaped rotors that rotate in opposite directions within a sealed housing. Unlike traditional compressors that rely on oil for lubrication, sealing, and cooling, the oil - free helical - lobe compressor operates without the use of oil. This design helps to prevent oil contamination in the compressed air or gas, making it suitable for applications where clean and oil - free compressed air is required, such as in the food and beverage industry, pharmaceutical industry, and electronics manufacturing.
