An oil-free helium compressor is a specially designed compression device used for compressing oil-free helium gas. It incorporates oil-free lubrication technology to avoid using lubricating oil and prevent oil contamination in the helium gas. Oil-free helium compressors typically achieve helium compression through special vortex technology or dry compression technology. Due to their oil-free design, they are widely applicable in applications that require high purity helium gas, such as aerospace, semiconductor manufacturing, and laboratory research. Additionally, oil-free helium compressors offer the advantages of being environmentally friendly, energy-efficient, and requiring minimal maintenance.

The global Oil-free Helium Compressor market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
