The global Oil-immersed Vertical Current Transformer market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Oil-immersed vertical current transformer is a kind of power measurement equipment, mainly used in the fields of power metering, protection and automation systems in substations, to measure current changes in high-voltage power equipment.

Current transformers (CTs) are essential components in electrical power systems and are used for measuring, monitoring, and protecting against excessive current flow. The global transition toward renewable energy sources, such as wind and solar power, has led to an increased demand for current transformers in both generation and distribution systems. CTs are used for current measurement and protection in renewable energy installations.The development of smart grids and the modernization of existing electrical grids have driven the need for advanced current transformers that support more accurate monitoring, control, and data collection. CTs are crucial for managing grid efficiency and reliability. Current transformers are increasingly equipped with digital outputs and communication interfaces (e.g., IEC 61850) to enable seamless integration into digital substations and IoT (Internet of Things) systems for real-time monitoring and data analysis.The Asia-Pacific region, including China and India, has seen significant growth in the electrical and power sectors. The demand for current transformers has been driven by infrastructure development and industrial expansion in this region.
