The global Oil Mill Machines market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Oil mill machines, also known as oil extraction machines or oil press machines, are equipment used in the extraction of oil from seeds, nuts, and other oil-bearing materials. These machines play a vital role in the production of edible oils and industrial oils. There are various types of oil mill machines, each designed for specific applications and oil extraction methods.

The oil mill industry has been gradually embracing automation and digitalization to enhance production efficiency and quality control.

Cold press machines, which extract oil at lower temperatures, are gaining popularity due to the growing demand for high-quality, minimally processed, and unrefined edible oils.

Consumer demand for healthier and more natural oils has driven oil mill operators to adapt their processes to retain the nutritional value and flavor of the extracted oils. This trend is particularly relevant in the production of specialty oils like olive oil.

The global edible oil market continues to grow, which, in turn, fuels the demand for oil mill machines. Emerging economies with growing populations and increasing disposable incomes are significant contributors to this growth.
