The global Oil and Moisture Content NMR Analyzers market size is predicted to grow from US$ 300 million in 2025 to US$ 468 million in 2031; it is expected to grow at a CAGR of 7.7% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The Oil and Moisture Content NMR Analyzer uses low-field NMR to non-destructively measure the oil and moisture (water) content of a sample. The sample is placed in a magnetic field and excited with RF pulses, causing the hydrogen nuclei in liquids to resonate and absorb energy. By quantifying the total hydrogen signal, the device infers the sample's oil content and moisture (water) content. No sample preparation (drying or chemical extraction) is required, and both oil and water measurements can be obtained in seconds. This analyzer is widely used in agriculture/food (e.g. determining oil and moisture in oilseed crops) and can also be applied to measure oil-water saturation in geological cores or soils in petroleum and environmental studies.

United States market for Oil and Moisture Content NMR Analyzers is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Oil and Moisture Content NMR Analyzers is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
