The global Oil and Water Separator market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

An oil and water separator, also known as an oil-water separator or oil-water separator tank, is a device used to separate oil and water from a mixture. It is typically employed in industrial, commercial, or environmental applications where the separation of oil and water is necessary to comply with regulations or to prevent environmental pollution. The primary function of an oil and water separator is to remove oil or hydrocarbon substances from water. This separation process is achieved through the principles of gravity and coalescence. The separator takes advantage of the differences in density and immiscibility between oil and water.
