Oil-sand glass frosting powder is a material used for glass surface treatment. It mainly produces a "frosted" effect on the glass surface through chemical or physical methods. The core function of oil-sand glass frosting powder is to produce a uniform fog effect through the contact of fine particles with the glass surface, making the glass surface opaque or translucent, thereby achieving the effect of shielding, decoration or privacy protection. During use, oil-sand glass frosting powder can form a fine sandy effect on the glass surface, which not only improves the appearance of the glass, but also improves the light transmittance of the glass, adjusts the reflection and transmission of light, and has a certain anti-glare effect. Due to its unique decorative effect, oil-sand glass frosting powder has been widely used in architecture, home furnishing, art decoration and furniture design.
