Oil sludge treatment equipment is a kind of equipment specially used to treat oily sludge generated in the production process of oil fields. These sludges mainly come from the mining, storage, gathering, processing and treatment of crude oil produced liquid. The purpose of oil sludge treatment equipment is to effectively separate oil, water, solid impurities, etc. in sludge through a series of physical, chemical or biological methods, and meet environmental protection treatment standards to achieve resource recycling.

Oil sludge treatment equipment usually includes pretreatment equipment, separation equipment, heating and stirring equipment, storage equipment, automatic control equipment, etc. Oil sludge treatment equipment uses automatic control equipment to realize intelligent operation of the oil sludge treatment process and reduce labor costs. At the same time, oil sludge treatment equipment effectively separates oil, water and solid impurities in oil sludge to improve treatment efficiency. The treated oil, water and other components can meet environmental protection emission standards and reduce pollution to the environment.

The global Oil Sludge Treatment Equipment market size is projected to grow from US\$ 826 million in 2024 to US\$ 1173 million in 2030; it is expected to grow at a CAGR of 6.0% from 2024 to 2030.
