Oil solubility refers to hydrophobicity. By coating the surface of inorganic ZnCdSe/ZnS with hydrophobic ligands, quantum dots can be uniformly dispersed in non-polar organic solvents (such as hexane, toluene, chloroform, etc.), making it easier to process. The oil soluble quantum dots can be used as LED backlight to enhance the display color gamut after being packaged; In addition, oil soluble quantum dots can be coupled with biomolecules after surface modification and introduction of active groups, which can be used in fields such as biomarker/detection, high-throughput coding, in vivo imaging and dynamic tracing.
