According to our (LP Info Research) latest study, the global Oil Transformer market size was valued at US\$ million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Oil Transformer is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Oil Transformer market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Oil Transformer are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Oil Transformer. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Oil Transformer market.

Oil transformer is one of the important equipment in the power supply and distribution system of industrial and mining enterprises and civil buildings. This kind of product is suitable for AC 50 (60) Hz, three-phase maximum rated capacity 2500kVA (single-phase maximum rated capacity 833kVA, generally not recommended to use single-phase transformer), can be used indoors (outside), the capacity of 315kVA and below can be installed on the pole, the ambient temperature is not higher than 40 ° C, not lower than -25 ° C. The maximum daily average temperature is 30?, the maximum annual average temperature is 20?, the relative humidity is not more than 90% (ambient temperature is 25?), and the altitude is not more than 1000m. Transformer oil is a petroleum liquid, which has the possibility of combustion and has disadvantages in environmental protection. However, due to the characteristics of transformer oil with

excellent performance and low price, the vast majority of power transformers still use transformer oil as insulation and cooling media. Can be divided into three phase transformer and single phase transformer. In the three-phase power system, three-phase transformers are generally used, and when the capacity is too large and limited by transportation conditions, three single-phase transformers can also be used in the three-phase power system to form a transformer group.
