The global Oilfield Biocides and Bio-Solvents market size is predicted to grow from US\$ 245490 million in 2025 to US\$ 347470 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

Bio-solvents are used in oilfield operation during enhanced oil recovery processes as well as cleaners for oilfield equipment. Application of biocides in oilfield activities include its injection during oil recovery, fracking, drilling, pit treatment, and others. In the oilfield activities and especially during drilling and oil recovery, microorganisms can have a severe impact on the oil recovery process due to microbial corrosion of the equipment and the piping systems and by formation of bio-films on the walls of storage tanks, on the filters and valves. Thus, plugging the flow and causing degradation of the oilfield chemicals being used and corrosion of the pipes. Biocides are used to kill these microorganisms to prevent these situations.

Oilfield biocides and biosolvents are chemicals that play a key role in the petroleum industry. Oilfield biocides are specially designed chemicals used to control the growth of microorganisms in oil wells and oilfield facilities to prevent biofouling and sediment accumulation, thereby maintaining the normal operation of production equipment and the quality of crude oil. Biosolvents are used in oil field development to deal with problems in oil reservoirs and oil wells, such as enhancing oil recovery and improving oil well permeability. Through unique formulations and application methods, these chemicals help the petroleum industry reduce operational risks, increase production efficiency, and meet environmental protection and sustainable development requirements. With the continuous development and technological innovation of the petroleum industry, the market of oilfield fungicides and biosolvents plays an important role in optimizing oilfield production and environmental protection, providing key support

for the sustainable development of the energy industry.
