## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The numerous health benefits of the Mediterranean diet are thought to be provided in part by the polyphenols present in olives and olive oils. Olives and extracted olive oils contain over 35 different types of polyphenols. Importantly, research shows that polyphenols from olives and olive oils can provide antioxidant and anti-inflammatory benefits in most, but not all, individuals when consumed in sufficient quantities on a regular basis.

Different olive oils have a different flavor, shelf life, quality, and polyphenol content depending on where the olives were grown, how they were processed, and their varietal makeup. In particular, the polyphenol concentration of olive oils can be affected by the olives themselves, based on the variety, age of tree, region grown, agricultural techniques, and maturity of the olive fruit at harvest. Polyphenol content is also affected by environmental factors including soil type, sun exposure, and rainfall.

The polyphenol amounts, purity, and types will vary depending on the source of the olive components used in these products. For example, olive leaf supplements, which are made with olive leaf extracts, do not contain the same levels of free hydroxytyrosol and tyrosol as those found in olive fruit extracts and olive oil products. Olive leaf extracts typically contain oleuropein, which the body converts to hydroxytyrosol on a limited basis. Similarly, synthetics and chemically produced extracts may introduce chemicals not normally associated with natural products.
