OLED Blue Light Material in this report focus on the blue emitters used in the OLED display panel. OLED Light Material is used to generate red, yellow and blue light in the display panel, it is worth noting that the blue pixels are not as good as the red pixels in terms of longevity, this has brought many challenges to the material industry, and for example, red and green pixels can be built as phosphorescent Emitter, but there are no blue phosphorescent emitters available. There are currently challenges with OLED emitters that TADF aims to solve - an efficient and long-lasting blue color emitter
