## Abstracts

The global OLED Driver Board market size is predicted to grow from US\$ 8056 million in 2025 to US\$ 16231 million in 2032; it is expected to grow at a CAGR of 10.6% from 2026 to 2032.

An OLED Driver Board is an electronic module used to control and drive an OLED display. It receives signals from a main control chip and converts them into voltages, currents, and scanning controls recognizable by the OLED panel, enabling precise pixel illumination and grayscale display. In 2025, global OLED driver board production reached approximately 1.098 billion units, with an average global market price of around US\$ 7.5 per unit. Annual production capacity is 1.2 billion units. Gross Profit Margin: 28%. The OLED driver board industry chain is highly integrated and technology-intensive. Upstream mainly consists of silicon wafers, driver ICs, PCB substrates, and electronic components. Midstream focuses on the design, assembly, and testing of the driver boards, which are critical for converting control signals into precise voltages and currents for OLED panels. Downstream includes applications in smartphones, wearable devices, automotive displays, AR/VR headsets, and other consumer electronics, which drive continuous innovation and demand growth in the midstream manufacturing segment. OLED driver boards represent a pivotal component in the display ecosystem, bridging advanced IC technology with practical end-user applications. With the rapid adoption of high-resolution, flexible, and micro-displays, the design complexity and integration level of driver boards will continue to rise. I believe domestic manufacturers, particularly in China, have significant potential to capture more market share by leveraging localized supply chains and cost-efficient production while meeting high technical requirements.

United States market for OLED Driver Board is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for OLED Driver Board is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
