OLED Encapsulation Film refers to advanced thin-film materials used to protect OLED display components from moisture, oxygen, and environmental degradation. These films are mainly used in flexible OLED and foldable display applications, providing barrier protection while maintaining optical transparency and mechanical flexibility. They typically consist of multilayer structures combining polymer films, inorganic barrier layers, and adhesive materials. The product scope includes flexible OLED encapsulation films, thin-film encapsulation materials, and multilayer barrier films, excluding traditional glass encapsulation materials.

The industry chain of OLED Encapsulation Film includes upstream functional materials, midstream film manufacturing, and downstream OLED display applications. Upstream suppliers provide polymer substrates, inorganic barrier materials, optical films, adhesives, and coating chemicals. Midstream manufacturers conduct multilayer coating,
