## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The global OLEDoS Display market size is projected to grow from US\$ 484.3 million in 2022 to US\$ 12500 million in 2029; it is expected to grow at a CAGR of 59.1% from 2023 to 2029.

From the perspective of virtual reality display technology, after 2018, the emergence of Fast-LCD technology has made LCD gradually become the mainstream choice for AR/VR devices. From 2022, the display scheme will be further iterated, and industry leaders will begin to use Fast-LCD display panels with Mini LED backlights, or use Micro OLEDs to improve display performance. At present, most AR/VR devices still use LCD solutions. Driven by the development of the AR/VR industry and the improvement of performance requirements, the market size of Micro OLED display panels is expected to expand rapidly.

OLEDoS displays also called Micro OLED, are silicon-based OLED display that use a monocrystalline silicon wafer as the actively driven backplane, so it is easier to achieve high PPI (pixel density), a high degree of integration, and small size. This ensures they are easy to carry, have good anti-seismic performance, and have ultra-low power consumption. Micro OLED displays are particularly suitable for AR and VR wearables.
