Abstracts

According to this study, the global Oligonucleotide-based Therapies market size will reach US\$ 9362 million by 2031.

Many pharmaceutical companies were conducting research on oligonucleotide therapy, which employs chemically synthesized nucleotide-like small molecule drugs with potential specificity similar to that of therapeutic antibodies.

Although several types of oligonucleotide therapies exist, five of them are compared here, including the ones targeting nucleic acids (such as mRNA) or proteins, as well as others intended for stimulation of the immune system. DDS is generally used with oligonucleotide therapy, as it is difficult for these molecules to penetrate cell membrane when administered on their own.

Biogen is the industry's biggest player, with more than 76 percent of 2018 revenue, followed by Sarepta Therapeutics and Jazz Pharmaceuticals, with 13.35 percent and 6.63 percent, respectively. North America and Europe are the most important regions, accounting for more than 80 percent of the combined income.
