According to this study, the global Oligonucleotide Synthesis Services market size will reach US\$ 1416 million by 2031.

Oligonucleotide synthesis is the chemical synthesis of relatively short fragments of nucleic acids with defined chemical structure (sequence). The technique is extremely useful in current laboratory practice because it provides a rapid and inexpensive access to custom-made oligonucleotides of the desired sequence.

The oligonucleotide synthesis market is driven by the growing demand for synthetic oligonucleotides in various applications, including research, diagnostics, and therapeutics. Oligonucleotides play a crucial role in gene editing, PCR, RNA interference, and other molecular biology techniques. The rise in genetic research and personalized medicine further propels market growth. Moreover, advancements in synthesis technologies, such as phosphoramidite chemistry and solid-phase synthesis, have improved the efficiency and scalability of oligonucleotide production. However, challenges include the high cost of synthesis reagents, the need for specialized equipment and expertise for large-scale synthesis, and ensuring the quality and purity of synthetic oligonucleotides. Overcoming these challenges through process optimization, cost-effective solutions, and strict quality control measures will be vital for the sustained growth of the oligonucleotide synthesis market.
