According to our LPI (LP Information) latest study, the global Oligonucleotide Therapeutics market size was valued at US\$ 3598.1 million in 2023. With growing demand in downstream market, the Oligonucleotide Therapeutics is forecast to a readjusted size of US\$ 11010 million by 2030 with a CAGR of 17.3% during review period.

The research report highlights the growth potential of the global Oligonucleotide Therapeutics market. Oligonucleotide Therapeutics are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Oligonucleotide Therapeutics. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Oligonucleotide Therapeutics market.

Many pharmaceutical companies were conducting research on oligonucleotide therapy, which employs chemically synthesized nucleotide-like small molecule drugs with potential specificity similar to that of therapeutic antibodies.

Although several types of oligonucleotide therapies exist, five of them are compared here, including the ones targeting nucleic acids (such as mRNA) or proteins, as well as others intended for stimulation of the immune system. DDS is generally used with oligonucleotide therapy, as it is difficult for these molecules to penetrate cell membrane when administered on their own.

Biogen is the industry's biggest player, with more than 76 percent of 2018 revenue, followed by Sarepta Therapeutics and Jazz Pharmaceuticals, with 13.35 percent and 6.63 percent, respectively. North America and Europe are the most important regions, accounting for more than 80 percent of the combined income.
