The global Oligosaccharide Syrup market size is predicted to grow from US\$ 1404 million in 2025 to US\$ 1818 million in 2032; it is expected to grow at a CAGR of 3.8% from 2026 to 2032.

Oligosaccharide syrup is a type of syrup made from the hydrolysis of starch, which breaks down the starch into shorter chains of sugar molecules known as oligosaccharides. Oligosaccharides are composed of two to ten sugar units and are considered prebiotic fibers that provide a number of health benefits. Oligosaccharide syrup is commonly used as a sweetener in various food products and beverages, as it is less sweet than regular sugar and has a lower glycemic index. It is also used as a functional ingredient in various food applications, such as a texturizer, thickener, or a binding agent.

The global market for oligosaccharide syrup is experiencing significant growth, driven by increasing consumer awareness of health and wellness, as well as the growing demand for natural and functional ingredients in food and beverages. Oligosaccharides are a type of carbohydrate composed of a few simple sugars linked together, and their syrup form is gaining popularity as a natural sweetener and functional ingredient with potential health benefits. Asia-Pacific is a key market for oligosaccharide syrup, particularly countries like China, Japan, and South Korea, where functional food and traditional health concepts have a strong cultural influence. The demand for natural and healthier alternatives to traditional sweeteners is driving the adoption of oligosaccharide syrup in North America. European consumers' preference for clean label and natural ingredients is contributing to the growth of the oligosaccharide syrup market in the region.
