OSLO Crystallizer also called Classified-Suspension Crystallizer is the oldest design developed for the production of large, coarse crystals. The primary advantage of the OSLO Crystallizer until today is the ability to grow crystals in a fluidized bed, which is not subject to mechanical circulation methods. A crystal in an OSLO unit will grow unhindered, to the size that its residence time in the fluid bed will allow. The result is that an OSLO Crystallizer will grow the largest crystals, as compared to other crystallizer types. The slurry is removed from the crystallizer's fluidized bed and sent to typical centrifugation sections.
