Abstracts

The global Omega-3 Supplements for Pet market size is predicted to grow from US$ 374 million in 2025 to US$ 554 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

Omega-3 Supplements for Pet refers to finished nutritional supplement products formulated for dogs, cats and other companion animals, in which omega-3 polyunsaturated fatty acids are the principal functional nutrients. The market primarily covers standalone liquid oils, softgels/capsules, soft chews, powders, emulsions and related supplemental formats administered in addition to the animal's regular diet. Core active fatty acids include eicosapentaenoic acid (EPA), docosahexaenoic acid (DHA) and, in selected plant-derived products, alpha-linolenic acid (ALA). Major ingredient sources include marine fish oil, krill oil, microalgal oil and plant oils, while commercially differentiated products may also incorporate antioxidants, flavoring or palatability systems and complementary nutritional ingredients. Product quality is evaluated through EPA and DHA content per serving, total omega-3 concentration, source and traceability, oxidation stability, contaminant control, dosage accuracy, palatability and shelf stability. The research scope focuses on independently marketed Omega-3 Supplements for Pet used primarily for skin and coat, joint and mobility, cardiovascular, cognitive, visual and general nutritional support. In the U.S. regulatory framework, fatty-acid nutritional supplements for pets are treated within the animal-feed/pet-food framework, while European nutritional guidance similarly recognizes omega-3 fatty acids as relevant components of canine and feline nutrition.

Key Findings

Fish oil remains the mainstream commercial source, with EPA and DHA serving as the

+357 96 030922
info@marketpublishers.com

principal value-defining active ingredients

Liquid oils, softgels and soft chews form the core commercial dosage formats

Dogs represent the broadest application base, while cat-specific products emphasize dosage control and palatability

Quality differentiation increasingly centers on EPA+DHA concentration, oxidation control, traceability and formulation convenience

In 2025, global omega-3 supplements for pet production reached approximately 1091.6 k units, the average price is 35 usd/unit

Market Trends

Omega-3 Supplements for Pet is moving from basic fish-oil supplementation toward a more segmented functional-nutrition market. Conventional liquid marine oils remain important because they provide relatively high EPA and DHA content at competitive cost, but softgels and soft chews are gaining strategic relevance where convenience, dosing accuracy and palatability influence repeat purchase. Established brands increasingly differentiate products by actual EPA+DHA delivered per serving rather than total fish-oil quantity, while triglyceride and re-esterified triglyceride oils, sustainably sourced marine ingredients and specialized formulations are used to support premium positioning. The ingredient base is also diversifying. Fish oil remains the mainstream platform, but krill and microalgal oils provide alternative sourcing routes, particularly for premium, sustainability-oriented and non-fish positioning. FDA-reviewed information confirms that Schizochytrium-derived algal oil containing EPA and DHA can serve as a nutritive ingredient for dogs. At the finished-product level, leading product portfolios already span liquids, softgels and soft chews, indicating that formulation convenience is becoming almost as important as the underlying lipid source.

Market Dynamics

Drivers

The principal driver is the continuing shift in pet ownership toward proactive nutritional management and more specialized companion-animal wellness products. Omega-3 fatty acids are particularly well suited to this trend because EPA and DHA can be incorporated into products addressing multiple recurring nutritional-support needs,

+357 96 030922
info@marketpublishers.com

including skin and coat condition, joint mobility, cardiovascular health, brain and visual function and overall wellness. The category also benefits from a replenishment-based purchase model: liquid oils, capsules and chews are consumed continuously rather than purchased as durable products. Veterinary recommendation provides an additional demand pathway, especially for products with clearly declared EPA/DHA dosage and quality controls. Current commercial portfolios demonstrate that the same active ingredient platform can be segmented by species, body weight, life stage, delivery format and functional claim. Nutramax's Welactin, for example, currently offers liquid, softgel and soft-chew formats for dogs and cats, while Nordic Naturals provides differentiated pet products and weight-based feeding recommendations.

Restraints

Market expansion is constrained by raw-material quality variability, oxidation sensitivity, product-price dispersion and regulatory limitations on claims. Omega-3 oils are susceptible to oxidative deterioration during processing, storage and consumer use; poor control can affect odor, palatability, shelf life and perceived product quality. The broader omega-3 industry therefore uses peroxide value, p-anisidine value and TOTOX as important oxidation indicators, alongside contaminant and heavy-metal control. Another constraint is that consumers can find omega-3 fatty acids in complete pet food, functional treats and standalone supplements, which increases substitution between product formats and complicates communication of incremental nutritional value. Regulatory positioning also requires careful management. AAFCO states that nutrient supplements such as fatty acids are treated as pet food under U.S. animal-feed regulations, while disease-treatment or prevention claims can move products toward drug regulation. This limits the extent to which brands can use therapeutic language even when products are marketed through veterinary-oriented channels.

Opportunities

The strongest opportunities lie in premiumization, alternative omega-3 sources and more precise dose delivery. Products with higher EPA+DHA concentration can provide the required amount in smaller serving volumes, supporting premium positioning and improving convenience for smaller dogs and cats. Krill and microalgal oils create additional differentiation through alternative lipid composition, sustainability narratives and reduced reliance on conventional marine fish supply chains. Soft-chew formats offer another avenue for value creation because they combine supplementation with treat-like administration and can incorporate complementary ingredients targeted at skin, joint, immune or digestive support. There is also room for greater species and life-stage segmentation, particularly cat-specific products, where small serving size and

+357 96 030922
info@marketpublishers.com

palatability are more demanding. Quality certification and traceability represent an additional commercial opportunity: NASC's industry framework emphasizes audited quality systems, production controls, adverse-event systems, label compliance and independent product testing, increasing the value of transparent manufacturing and verified label claims.

Challenges

The major challenge is converting a chemically familiar ingredient into a defensible branded product in a crowded pet-supplement environment. Two products can both be marketed as fish oil while differing materially in EPA+DHA concentration, serving size, oxidation status, source traceability and stability after opening. Brands therefore need to communicate effective dosage rather than relying only on gross oil content. Palatability is particularly important because oxidation or strong marine odor can reduce compliance in daily feeding, undermining repeat purchase. Supply-chain quality also requires ongoing control of contaminants, oxidation and batch variability. At the regulatory level, the absence of a human-style dietary-supplement category for animals in the U.S. makes ingredient acceptability, labeling and claims management an important operating capability. AAFCO specifically notes that animal products are regulated as food/feed or drugs rather than under the human dietary-supplement framework. At the same time, growing reliance on contract manufacturing creates an additional challenge for brands: product consistency, traceability and quality responsibility must be maintained even when formulation, encapsulation or packaging is outsourced.

Industry Chain Analysis

The upstream industry chain begins with marine fisheries, fish-processing by-products, krill harvesting, microalgae fermentation and oilseed agriculture. These feedstocks are converted into crude fish, krill, algal or plant oils before undergoing refining, deodorization, contaminant removal, concentration and stabilization. Higher-value marine omega-3 ingredients may be standardized to specific EPA and DHA levels and supplied in triglyceride, re-esterified triglyceride or other commercially relevant lipid forms. Microalgal routes use controlled fermentation and downstream separation to produce EPA/DHA-rich oils; FDA-reviewed material for Schizochytrium-derived oil describes fermentation, enzymatic treatment, centrifugation and controlled drying as part of the production process. Quality and cost at this stage are influenced by EPA/DHA concentration, raw-material origin, purification intensity, sustainability certification, oxidation stability and contaminant specifications. NASC's supplier

+357 96 030922
info@marketpublishers.com

framework also demonstrates the presence of dedicated omega-3 ingredient suppliers serving pet-health formulations.

Midstream manufacturers formulate and convert these oils into finished Omega-3 Supplements for Pet through blending, antioxidant stabilization, flavor and palatability adjustment, encapsulation, soft-chew manufacturing, filling and packaging. The industry combines vertically integrated brands, specialist pet-supplement manufacturers and contract manufacturing/OEM models. Downstream distribution spans veterinary clinics, pet-specialty stores, mass retail, e-commerce and brand-direct channels. Value creation therefore extends beyond the raw oil itself: formulation accuracy, EPA/DHA dosing, oxidation management, dosage convenience, packaging protection, quality testing, brand credibility and channel access all contribute to finished-product pricing. NASC confirms that audited pet supplements are sold across veterinary, specialty pet, supermarket, big-box and online channels, illustrating the category's multi-channel structure.

Segment Insights

By ingredient source, fish-oil-based products remain the central commercial segment because they provide established access to long-chain EPA and DHA and can be offered across both mass-market and premium price tiers. Within this segment, differentiation is increasingly driven by species of origin, concentration, purification, triglyceride form, sustainable sourcing and freshness rather than by the generic "fish oil" label. Krill-based products occupy a more premium niche, while algal oil has strategic potential as a scalable alternative source of long-chain omega-3 fatty acids. Plant-based products primarily supply ALA and therefore occupy a different nutritional position from direct EPA/DHA supplements. This distinction is important for market segmentation because products with similar "Omega-3" labels can deliver materially different active-fatty-acid profiles.

By dosage form, liquid oils provide efficient delivery of relatively large EPA+DHA doses and remain well suited to daily food-topper use. Softgels provide measured dosing and better protection of the oil from repeated bottle opening, while soft chews offer higher convenience and palatability and can support greater formulation value through additional functional ingredients. Current leading portfolios already use all three formats: Welactin markets liquid, softgel and soft-chew products, while Nordic Naturals offers liquid and softgel Omega-3 Pet products alongside functional pet soft chews. This indicates a market moving toward dosage-form segmentation rather than a single dominant physical format.

+357 96 030922
info@marketpublishers.com

Downstream Market Opportunities

Dogs form the broadest downstream opportunity because products can be differentiated across a wide body-weight range and numerous functional-support needs, allowing manufacturers to offer multiple serving strengths and package sizes. Cats represent a smaller but strategically attractive segment in which concentrated oils, small-dose liquid formats and palatability become particularly important. Skin and coat support remains one of the most established consumer-facing applications, while joint and mobility, cardiovascular, cognitive, brain and vision support expand the functional positioning of EPA/DHA products. Veterinary-oriented channels create opportunities for higher-concentration and more precisely dosed formulations, whereas e-commerce and pet-specialty retail favor easy-to-understand formats such as pumps, soft chews and daily softgels. The downstream opportunity therefore lies not only in increasing pet supplement penetration, but also in matching dose, formulation and delivery format more precisely to species, body weight and owner administration preferences. Current commercial products already demonstrate weight-based dosing and species-specific formulations for both dogs and cats.

Regional Insights

North America is a key mature market for Omega-3 Supplements for Pet, supported by a dense specialist-brand base, established veterinary and pet-specialty channels and an institutionalized animal-supplement quality ecosystem. The confirmed supplier database includes numerous U.S.-based brands spanning veterinary products, premium fish oils, soft chews and direct-to-consumer offerings. NASC’s member and quality-audit framework further illustrates the depth of the U.S. animal-supplement ecosystem and the importance placed on production controls, labeling and independent verification. Europe has a strong animal-health and veterinary-nutrition position, supported by established manufacturers and FEDIAF’s nutritional framework for complete and complementary foods for dogs and cats.

Asia represents a growing manufacturing and brand-development base. China has developed an increasingly broad domestic pet-nutrition supply chain covering branded finished supplements, softgel and liquid-oil manufacturing and OEM/ODM production, with confirmed companies in the current study. Regional competition is therefore becoming more differentiated: mature Western markets emphasize formulation credibility, veterinary positioning and premium quality, while China combines expanding domestic pet-health consumption with increasingly capable local manufacturing and contract-production infrastructure.

+357 96 030922
info@marketpublishers.com

Competitive Landscape Analysis

The Omega-3 Supplements for Pet market is fragmented across specialist omega-3 brands, veterinary-health companies, diversified pet-supplement groups and vertically integrated Chinese pet-nutrition manufacturers. Nordic Naturals competes through specialist omega-3 expertise, differentiated fish-oil formats and strong quality positioning; Nutramax Laboratories uses the Welactin platform to address veterinary-oriented dog and cat applications across liquid, softgel and soft-chew formats; Vetoquinol, Dechra Pharmaceuticals and Virbac participate through broader companion-animal health portfolios. FoodScience, H&H Group, Grizzly Pet Products, Standard Process, Rx Vitamins, Wholistic Pet Organics, Native Pet and other confirmed brands create additional competition across veterinary, specialty retail and online channels. Competitive advantage increasingly depends on verifiable EPA+DHA delivery, oxidation and contaminant control, ingredient traceability, palatability, formulation differentiation, manufacturing quality and access to trusted retail or veterinary channels. Contract manufacturing is common, so brand-level sales and OEM manufacturing revenue must be separated when assessing company market shares to avoid double counting.

Report Scope

LP Information, Inc. (LPI) ' newest research report, the “Omega-3 Supplements for Pet Industry Forecast” looks at past sales and reviews total world Omega-3 Supplements for Pet sales in 2025, providing a comprehensive analysis by region and market sector of projected Omega-3 Supplements for Pet sales for 2026 through 2032. With Omega-3 Supplements for Pet sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US$ millions of the world Omega-3 Supplements for Pet industry.

This Insight Report provides a comprehensive analysis of the global Omega-3 Supplements for Pet landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyzes the strategies of leading global companies with a focus on Omega-3 Supplements for Pet portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms’ unique position in an accelerating global Omega-3 Supplements for Pet market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Omega-3 Supplements for Pet and breaks down the forecast by Source, by Application, geography, and market size to highlight emerging

+357 96 030922
info@marketpublishers.com

pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Omega-3 Supplements for Pet.

This report presents a comprehensive overview, market shares, and growth opportunities of Omega-3 Supplements for Pet market by product type, application, key manufacturers and key regions and countries.

Key Questions Addressed in this Report

What is the 10-year outlook for the global Omega-3 Supplements for Pet market?

What factors are driving Omega-3 Supplements for Pet market growth, globally and by region?

Which technologies are poised for the fastest growth by market and region?

How do Omega-3 Supplements for Pet market opportunities vary by end market size?

How does Omega-3 Supplements for Pet break out by Source, by Application?
