DMS (Driver Monitor System) is the abbreviation of Driver Monitoring System, which refers to the information technology system that monitors the driver's fatigue state and dangerous driving behaviors around the clock while the driver is driving. After discovering that the driver is fatigued, yawning, squinting and other wrong driving conditions, the DMS system will analyze such behavior in a timely manner, and provide voice and light prompts to alert the driver and correct the wrong driving behavior. .DMS is generally divided into active DMS and passive DMS. Passive DMS judges the driver's state based on steering wheel steering and driving trajectory characteristics. Active DMS systems are generally based on cameras and near-infrared technology to detect the status of the driver from eyelid closure, blinking, gaze direction, yawning and head movement, etc.
