The global On-Board Hydrogen Storage Bottle for Fuel Cell Vehicles market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The on-board hydrogen storage bottle is one of the key components of the fuel cell system. As the energy storage unit of the fuel cell vehicle, it is used to store and provide hydrogen for the electrochemical reaction of the stack. The improvement of on-board hydrogen storage technology is the top priority in the development of fuel cell vehicles. Its storage volume, light weight, and safety performance greatly affect the driving range and safe operation of fuel cell vehicles. At present, high-pressure gaseous hydrogen storage is the most mature vehicle-mounted hydrogen storage method, and it has taken the lead in realizing large-scale commercial application.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
