The on load tap changer oil filter is a specialized equipment used for oil purification and maintenance in the oil chamber of power transformers. It mainly processes the insulation oil through filtration, dehydration, degassing, and impurity separation to remove particulate pollutants, moisture, and gases from the oil, improve the insulation performance of the oil, and extend the service life of the on load tap changer contacts and insulation system. This device is commonly used in power grid substations, power plants, and large industrial power systems, and can achieve online or offline oil processing. It is an important auxiliary equipment to ensure the reliable operation of on load tap changers. In 2025, global On-load Tap-Changer Oil Filter production reached approximately 38,764 Units, with an average global market price of around US\$ 21,675 per unit.

The annual production capacity of on load tap changer oil filters is 50,000 units, with a gross profit margin of about 30%.

Upstream: mainly includes suppliers of mechanical equipment components and electrical components, such as vacuum pumps, oil pumps, filter elements, oil-water separation devices, stainless steel containers, pressure pipelines, valves, motors, control systems, and instruments, while also involving the steel and automation control component industries.

Downstream: The main customers include power grid companies, substation operation

and maintenance units, power equipment manufacturers, as well as power plants and large industrial enterprises, applied in scenarios such as on load tap changer maintenance, transformer oil purification, and power equipment maintenance.

Raw material and core component costs account for approximately 50% to 60%, manufacturing and assembly costs account for approximately 15% to 20%, research and development and technology costs account for approximately 5% to 10%, quality inspection and certification costs account for approximately 5% to 8%, and sales and service costs account for approximately 5% to 8%.
