The global Oncolytic Virus Therapy market size is predicted to grow from US\$ 11.2 million in 2025 to US\$ 44.3 million in 2031; it is expected to grow at a CAGR of 25.8% from 2025 to 2031.

Oncolytic Virus Therapy is an exciting, increasingly recognized discipline in cancer research. Although the connection between viruses and cancer regression was recognized in the early 20th century, it wasn't until the recent development of advanced genetic engineering techniques that true progress has been made using virotherapy to attack and destroy cancer cells. Today, researchers can modify existing viruses to create new oncolytic viruses that are less susceptible to immune suppression while more specifically targeting particular classes of cancer cells. Additionally, these modified oncolytic viruses can be adapted to insert and express cancer-suppressing genes and diagnostic proteins.

Amgen, Colytics Biotech, Iralytics and Ransgene SA are the leading providers of oncolytic virus therapy, with the first 3 accounting for about 60% of the market.

North America and Europe are the main markets, each accounting for about 40% of the market.
