The global One-Cell Permeability Test System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The One-Cell Permeability Test System is a laboratory method used to evaluate the permeability of cell membranes. This test system is commonly used in drug development research to measure the ability of potential drug compounds to cross cell membranes and enter cells. The test involves growing cells on a membrane barrier and exposing them to a solution containing the drug compound. By measuring the amount of the drug that passes through the cell membrane over time, researchers can assess the drug's ability to permeate cell barriers and potentially be effective in treating diseases.
