One-component acid sealant is a sealant material primarily composed of acid-functional silanes, widely used for joint sealing and bonding in construction, automotive, electronics, and photovoltaic industries. It features a single-component formula requiring no mixing, easy application, and cures upon exposure to moisture in the air to form an elastic sealant layer. The sealant provides strong adhesion, weather resistance, UV resistance, and thermal stability. Common types include acetoxy, alkoxy, ketoxime, and aminosilane, which are selected based on substrate properties and application conditions. The supply chain is structured as follows: upstream includes raw material suppliers of silanes, fillers, and catalysts; midstream consists of sealant manufacturers and system integrators; and downstream involves construction contractors, automotive manufacturers, electronics, and photovoltaic equipment producers responsible for procurement, application, and maintenance, forming a complete industry ecosystem.

United States market for One-Component Acid Sealant is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
