The global One-Component Thermally Conductive Structural Adhesive market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

One-component thermally conductive structural adhesive is a special adhesive with the characteristics of single component, excellent thermal conductivity and high bonding strength. As electronic equipment develops toward miniaturization and high efficiency, thermal conductivity issues have become one of the important factors restricting the performance of electronic equipment. With the development of emerging technologies such as 5G and the Internet of Things, electronic equipment will become more dense, heat flow density will continue to increase, and the demand for thermal conductive materials will become more urgent. As an efficient and environmentally friendly thermal conductive material, single-component thermally conductive structural adhesive will be more widely recognized and applied for its heat dissipation and bonding properties.
