The global One-time Programmable Read-only Memory market size is predicted to grow from US$ 799 million in 2025 to US$ 1148 million in 2031; it is expected to grow at a CAGR of 6.2% from 2025 to 2031.

One-time Programmable Read-Only Memory (OTP-ROM) is a computer storage memory chip that allows data to be written into the device using a PROM programmer, but only once. Once written, the data is permanently stored and cannot be changed. It is often used to store fixed programs and data, such as program codes for products such as electronic games or electronic dictionaries. Because it can only be programmed once, if the programming is wrong, the chip can only be purchased again.

United States market for One-time Programmable Read-only Memory is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
