## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

One-touch fittings are fittings that easily connect different parts, such as pipes and tubes, by simply inserting them. Also referred to as 'push-in fittings' for thermoplastic resin tubing. As the name suggests, the fitting can be connected or disconnected with a single operation (one-touch fitting). Usually, the connection part of the fitting consists of a push button or lever, which can be easily connected or disconnected by operating them.

In addition to being quick to connect and disconnect, they can be easily operated manually without the need for tools or specialized knowledge. This is expected to reduce work time and increase productivity. In addition to simply connecting tubes, there are also parts designed for branching, orientation, and extension.

One-touch fittings are used in a variety of industries and applications. They are generally used in piping, pneumatic equipment, compressed air tubing, etc.

The global One-Touch Fitting market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
