The global Online Cable Monitoring market size is predicted to grow from US\$ 148 million in 2025 to US\$ 239 million in 2032; it is expected to grow at a CAGR of 7.2% from 2026 to 2032.

Online cable monitoring is a key component of the power grid. They play a protective and control role in the distribution of electricity in the grid. It is therefore important to monitor and predict the condition of these assets. Condition monitoring is therefore divided into three main tasks: circuit breaker drive monitoring, thermal monitoring and partial discharge monitoring.

1. Advancements in High-Precision and Real-Time Monitoring Technology

Future online cable monitoring systems will evolve toward high precision, real-time capabilities, and multi-parameter monitoring. By collecting multiple parameters such as current, voltage, temperature, partial discharge, harmonics, and insulation resistance in real time, these systems will achieve comprehensive perception of cable health status. New sensor technologies and signal processing algorithms will enhance early fault warning capabilities, reducing unexpected downtime and maintenance costs.

2. Advancements in Intelligence and Predictive Maintenance

With the integration of artificial intelligence, big data, and machine learning into industrial systems, online cable monitoring will achieve intelligent analysis and predictive maintenance. By combining historical data modeling with real-time monitoring, trends in cable aging, localized overheating, or insulation degradation can be forecasted. This enables optimized maintenance planning, extended cable lifespan,

and enhanced power supply reliability.

3. Integration and Multi-scenario Application Expansion

Future online cable monitoring systems will evolve toward higher integration, modularity, and multi-scenario applicability, covering diverse environments such as power systems, industrial automation, rail transit, wind power, and energy storage systems.

Concurrently, monitoring data will integrate deeply with SCADA, MES, or cloud platforms to enable remote monitoring, centralized management, and operational decision support, driving the digital and intelligent upgrade of cable asset management.
