Online coal quality testing equipment is an automated analysis system installed on conveyor belts or in production processes. It can detect key indicators of coal in real time, such as ash content, moisture, calorific value, sulfur content, and elemental composition. This improves coal blending accuracy, optimizes combustion efficiency, and reduces laboratory testing delays. It is widely used in coal mines, power plants, coal preparation plants, and bulk material transportation scenarios. The online coal quality testing equipment industry chain includes upstream components such as sensors or radiation sources, analysis modules, detectors, control electronic systems, algorithm software, and mechanical structural components; midstream components include system integration manufacturing, which integrates testing technology, data processing, calibration models, and automation interfaces; and downstream applications cover coal mines, power companies, ports, steel mills, and cement plants, with supporting installation, commissioning, model calibration, system maintenance, and technical support services to ensure testing accuracy, safety compliance, and long-term stable operation. In 2025, the global production volume of online coal quality testing equipment was approximately 2,364 units, with a global average market price of approximately US\$220,000 per unit. The gross profit margin of major companies in the industry ranged from 45% to 65%. In 2025, the global production capacity of online coal quality testing equipment was approximately 3,377 units.
