To address the challenges faced by software developers and educators in traditional programming environments, such as complex environment configuration, hardware resource limitations, inconvenient collaboration, and inefficient teaching assessment, online code compiler APIs have emerged. Since the maturation of cloud computing and web technologies in the early 21st century, coupled with the surge in demand for cloud-based development tools and remote collaboration, the service-oriented model of code compilation and execution has experienced rapid development. Currently, online code compiler APIs have evolved into standardized service interfaces that support instant compilation of multiple programming languages, secure sandbox execution, real-time error feedback, and high integrability. They are widely used in programming education, technical recruitment tests, developer documentation interaction, algorithm testing, and remote team collaboration, significantly lowering the barrier to entry for development environments, improving code verification and sharing efficiency, and empowering various platforms to quickly build interactive programming experiences.
